

DAB on Data

DAB ENERGY TRUST — Doubs · Adamstown · Buckeystown

Our Home, Our Coalition

September 18, 2026

We like it here. Keep Frederick looking like Frederick.

Compiled packet for County Executive, County Council, Planning Commission, and residents. Not a campaign committee filing.

Personal Statement — Nicholas M.

I live in the Buckeystown / DAB area of Frederick County, Maryland. I am a working neighbor, not a candidate for office.

My vote in the local election will be tied solely to attaching this Memo to the datacenter agreement.

I am offering a clear path. No other candidate I have seen is offering one.

I am not running for office.

I am fighting for my community anyway.

This packet is that path: a DAB ENERGY TRUST for Doubs, Adamstown, and Buckeystown — operator-funded meter credits for the host communities that live next to the Critical Digital Infrastructure overlay, with a grandfather clause that rewards keeping the Frederick we already have, and a public declaration that the host-community rebate is due because Winchester Hall's numbers came off Manor Woods ground.

We want farmers and rural neighbors to remain in their homes — not put land or houses up for sale because the overlay and the sprawl wave make selling look like the only move. The Grandfather Clause is a stay incentive: reward the Frederick that already exists (cutoff January 20, 2026), not a subsidy for new pads after that date. Exclusive host-community meter credits belong here because the CDI overlay sits in this rural road-box; keep Frederick rural, keep the boundary the wall.

Neighbors with a plan. Not a lawsuit. Not a protest. Not a campaign committee.

All we need is emails and signatures these days, no muskets! So, are there really any excuses?

Respectfully,

Nicholas M. Buckeystown / DAB area, Frederick County, MD September 18, 2026

Memorandum for Public Filing

FREDERICK COUNTY, MARYLAND

TO: County Executive; County Council; Planning Commission **FROM:** Nicholas M., DAB ENERGY TRUST (Doubs · Adamstown · Buckeystown), Frederick County, MD **DATE:** September 18, 2026 **RE:** DAB ENERGY TRUST — condition new CDI load and any DRRA on a local energy dividend, infrastructure leasehold, and residual interest for the rural host-community road-box of Doubs, Adamstown, and Buckeystown only **ACTION:** Introduce, enact, and attach to any revived Quantum / Catellus DRRA or site plan

Subtitle: Doubs · Adamstown · Buckeystown — Our Home, Our Coalition

1. Request

Enact a **DAB ENERGY TRUST** for residential electric meters whose service address sits in the tight rural

host-community road-box — west **Basford Road**, east the **Monocacy River**, south **Tuscarora Road**, north the **Elmer Derr Rd / Harshman Way / New Design Rd / Lime Kiln Rd** belt — covering **Doubs, Adamstown, and Buckeystown**, and staying short of the Ballenger Creek suburban mass. **Lime Kiln Run** is a creek, not a road.

Condition certificates of occupancy for additional Critical Digital Infrastructure (CDI) electrical load, and any Development Rights and Responsibilities Agreement, on three tools:

- **A. Energy Trust** — operators pay per energized megawatt; 100 percent of the dividend goes to eligible DAB meters until the proposed ordinance floor is met.
- **C. Infrastructure stake** — county or co-op holds title or a recorded lease on campus-serving water, sewer, roads, and right-of-way pads the public pays for; rent to the Trust.
- **D. Residual / equity** — covenant on land rezoned into LI or GI inside the overlay after January 20, 2026; seek 2027 state authority for a non-voting economic interest in CDI projects over 50 MW, dedicated to this Trust.

Do not fund the dividend by raising the real-property tax rate in these three communities. **Do not** exchange a multi-year zoning freeze for a one-time community-benefits package.

Purpose. Keep Frederick rural. The Trust pays operator-funded meter credits to host-community households so farmers and rural residents can **remain in their homes** and are less pressed to put land or houses up for sale under sprawl and data-center edge pressure. Grandfather = **stay incentive**, not a growth subsidy. **Exclusive by design.** Credits for meters in this rural road-box only — the CDI overlay sits here — **not Frederick City**. No freeloader expansion without a board vote **AND** a new County Council ordinance titled as an expansion (plus elder consult under Article IX-A). No matter who residents vote for, data centers are still going to be built here — a slogan does not stop steel. Get what is due: operator-funded meter credits (more money in household pockets) and a boundary that protects these places from freeloaders and the apartment/sprawl wave that tends to follow. Dividend = floor; boundary = wall.

Elder consult on geography changes (bylaws Article IX-A). Before the board votes on any Tier 1 geography change — expanding Tier 1 beyond this rural road-box, or otherwise amending the Article III geography lock — it must consult in good faith with ten residents age 65 or older who have lived in Doubs, Adamstown, or Buckeystown for at least ten years. The consult is advisory, on the record, and not a veto; a short summary goes with the minutes. It does not apply to routine clerical addressing corrections that do not enlarge Tier 1.

Board representation lock (bylaws Article IV). Five voting members; each of the three communities must hold at least one voting seat at all times. Default apportionment 2 Adamstown / 2 Buckeystown / 1 Doubs; Council may change the split by ordinance only if each town still has at least one seat. The Doubs seat is held by a resident of Doubs inside the road-box. Doubs is folded into the box with Adamstown and Buckeystown. This filing does not state a separate Doubs-only census count.

2. Why these three communities

Ordinance **26-01-001** (effective **January 20, 2026**) placed the CDI overlay — approximately **2,614.9 acres** (Maryland Supreme Court figure) — on the former Eastalco plant north of Adamstown. Those acres are roughly described by the industrial and grid edge around New Design Road, Manor Woods Road, Adamstown Road, Ballenger Creek Pike, and Digital Drive. Buckeystown and Doubs (unincorporated populated place / hamlet, not a Census CDP) sit on that same rural-industrial and grid edge. The road-box that hosts them is described in words in §1 and under Tier 1 below.

This is not for city folk up in Frederick who have been moving in and changing everything. It is for

people who actually live here — Doubs, Adamstown, Buckeystown — Our Home, Our Coalition. We are neighbors with a plan, not a protest.

Lived impact in Buckeystown is not a sterile statistic. MD 85 is Buckeystown Pike — a state highway through the Buckeystown Historic District. Residents pull out onto that road the way you would time a gap in freeway traffic. That is morning life on the overlay's doorstep.

Tier 1: residential meters whose service address sits in the tight rural host-community road-box — west **Basford Road**, east the **Monocacy River**, south **Tuscarora Road**, north the **Elmer Derr Rd / Harshman Way / New Design Rd / Lime Kiln Rd** belt — covering **Doubs, Adamstown, and Buckeystown**, and staying short of the Ballenger Creek suburban mass. **Lime Kiln Run** is a creek line, not a road. The CDI overlay (~**2,612** acres) and the Quantum / Catellus campus (~**2,100** acres) sit inside this box. About **2,000** homes and about **5,500** residents (Medium confidence; exact GIS clip pending). **ZIP codes are not the eligibility lock** — including ZIP **21704**, which is far too broad.

CDP note (not Trust base): Adamstown CDP **710** + Buckeystown CDP **499** = **1,209** Census households remain **place statistics only** — Adamstown / Buckeystown CDP 2020 stats (not the Trust base). Doubs is a hamlet, not a Census CDP, and is folded into the road-box.

Roughly **1,700–2,500** housing units and **4,600–6,700** residents until the exact clip. Working print: about **2,000** homes / about **5,500** residents. Not any ZIP. Rates below are proposed, not enacted law; do not lower the **\$250** floor or the **\$1,000** cap. The 72 MW hall figure is an illustration, not a tariff. Road-box framing uses about **2,612** acres for the overlay; the court figure remains about **2,614.9** acres.

ZIP codes are not the eligibility lock. ZIP 21710 may roughly track Adamstown street delivery, but ZIP 21717 is a USPS PO Box-only ZIP and does not cover Buckeystown street addresses. Many Buckeystown street addresses use ZIP 21704, a large delivery area with thousands of households — far too broad for this Trust. Eligibility is the road-box, not any ZIP. Before the first payment, the County Council shall publish a meter eligibility list mapped to the road-box (and any parcel refinements by ordinance).

3. Money already collected — not a local energy credit

HR&A Advisors (October 30, 2025), Tables 3 and 14, report Quantum-related recordation tax through 2025 year-to-date as follows: **\$1.40 million** on the Eastalco purchase, **\$6.67 million** on tenant sales, and **\$44.9 million** on debt service — **\$52.97 million** in total, or about **\$53 million**. County Executive Jessica Fitzwater testified that the project had already generated “over \$50 million in recordation tax revenue as of November 2025” (SB 427 testimony, February 18, 2026). The same HR&A tables report \$2.24 million in real property tax on land through 2025 YTD. This filing does not claim a June 30, 2026 county ledger total.

Recordation is split by formula among agricultural preservation, parks, schools, housing, and the general fund; a 2 percent transit share begins in FY2027 under Bill 26-03. That money does not appear as a power-bill credit on Adamstown, Buckeystown, or Doubs meters.

On **September 1, 2026**, the County Executive announced a Catellus community-benefits package headlined as “**\$110 million**” and tied to a proposed Development Rights and Responsibilities Agreement. The published line items were \$30 million for Carroll Manor Elementary School renovations; \$40 million for a community center and recreational space; \$14.5 million for workforce development and career and technical education; \$10.5 million for agricultural land preservation; \$10 million for perimeter berming, planting, and trails; \$5 million for a community solar project to reduce energy bills for Adamstown residents; and \$1 million for a fire engine for the Carroll Manor Volunteer Fire Company

— **\$111.0 million** if those figures are added as printed — together with roughly a 20 percent reduction in planned square footage, an 80 percent reduction in potable water use, and a 433-acre nature reserve on campus. This filing uses the county's "\$110 million" headline and notes the \$111.0 million line-item sum. The County Executive **rejected** that package on **September 14, 2026**. New CDI applications remain paused through July 1, 2027 (executive-order extension of September 14, 2026). Vested and under-construction work continues.

Estimate — what \$5M of solar would cover

The \$5 million community solar project in that rejected package was never sized. As an estimate, \$5 million buys about 2–3 MW of solar (assumes roughly \$1.7–\$2.5 per watt installed), making about 3,000–4,500 MWh a year in Maryland (assumes ~17% capacity factor).

Under those assumptions, that estimate covers roughly 14–20% of the about 2,000 homes' own use (assumes ~11 MWh per home per year), about 0.7–1% of one 72 MW hall at 70% load (~441,500 MWh/yr), and about 0.02–0.03% of the full 2.4 GW campus at 70% load (~14.7 million MWh/yr).

A one-time solar grant does not offset the host burden. An ongoing meter credit is the fix.

The Trust is a different instrument: an ongoing, megawatt-funded meter credit for the three host communities, not a one-time DRRA package. This filing does not propose exchanging a multi-year zoning freeze for that package or any successor one-time list.

4. Campus scale used for the formula

Published program for Quantum Frederick / the Catellus lead-developer campus: planned **2.4 gigawatts**, about **17.4 million square feet**, on about **2,100 acres**. That campus figure is not the same number as the CDI overlay acreage (~**2,614.9 acres**).

The campus was not at stabilized operations as of mid-2026; construction is underway. Aligned Data Centers: about **264 MW** planned across the campus; building IAD-04 (about **72 MW**) topped out in January 2026. Rowan Digital / AWS Bauxite construction is underway.

Countywide annual forecasts at full buildout / stabilization (not meter credits in Doubs, Adamstown, or Buckeystown):

- Sage Policy Group (October 2023): about **\$40.9 million** (about **\$41 million**) annual county fiscal revenue — about \$37.7 million real property plus about \$3.2 million income tax.
- County Executive SB 427 testimony (February 18, 2026): "approximately **\$68.8 million** annually in real property taxes" for the already-approved project.
- HR&A Table 16 (October 30, 2025): about **\$215 million** annual fiscal revenue (\$195 million real property on improvements + \$13.2 million real property on land + \$4.74 million personal income tax + \$2.04 million stormwater fee; table total \$214.98 million).

Those are Winchester Hall numbers, not Manor Woods numbers.

5. Proposed dividend (policy illustration — not enacted law)

The **\$250 floor** and **\$1,000 cap** below are a **proposed** ordinance floor and cap for Council to enact. They are **not current law**. Rates are not lowered for passage.

Rule	About 2,000 eligible meters in the rural road-box (Doubs · Adamstown · Buckeystown)	Notes
Proposed floor \$250 / meter / year after first hall energized	≈ \$500,000 / year	Proposed ordinance floor (annual)
\$1 per MWh of campus IT load, eligible host-community meters only	72 MW hall @ 70% load ≈ \$441,000 company / year (≈ \$221 / meter if only ~2,000 meters)	Illustration, not a tariff — annual credit tracks prior-12-month campus IT load between floor and cap
Proposed cap \$1,000 / meter until Council raises it	≈ \$2,000,000 / year	Proposed ordinance cap (annual)

Proposed floor **\$250** and cap **\$1,000** per eligible meter per year; **\$1 per MWh** of campus IT load between those rails. On about **2,000** meters: floor pool ≈ **\$500,000/yr**; cap pool ≈ **\$2,000,000/yr**. Illustration: one **72 MW** hall at **70%** load ≈ **\$441,000/yr** company-side (≈ **\$221/meter** on the ~2,000-meter base). **Not law until Council enacts**. Do not fund by raising the local real-property tax rate.

Pay as a utility-bill credit if the county obtains a rider; otherwise a county rebate or property-tax credit labeled DAB Energy Dividend (Doubs · Adamstown · Buckeystown). Exclusive host-community meter credits — because the overlay sits in this rural box.

Medium confidence on the home and resident print; exact GIS clip pending. Roughly **1,700–2,500** housing units and **4,600–6,700** residents. Not ZIP **21704**, and not any ZIP. Adamstown **710** + Buckeystown **499** = **1,209** are Adamstown / Buckeystown CDP 2020 stats (not the Trust base). Doubs is a hamlet, not a Census CDP, included via the road-box (and any published address list), not via an invented Doubs CDP count. **Lime Kiln Run** is a creek. Stay short of the Ballenger Creek suburban mass. The 72 MW hall at 70% is an illustration, not a tariff.

6. Zoning and DRRR hook

- § 1-19-10.1100 CDI overlay; LI/GI only; overlay less than 1% of county land.
- § 1-19-8.402 / 8.403 facilities and substations; 500-foot setback if abutting residential.
- Chapter 1-25 DRRR must list enhanced public benefits and their value — put the dividend and infrastructure lease in that paragraph.
- Maryland Supreme Court (opinion filed July 24, 2026): the overlay map is not a referendum subject. Change the map only by new plan and zoning acts.
- Aim conditions at new load, new map amendments, and any new DRRR. Do not claim confiscation of 2021 vested rights.

Legal Authority and Risk

The Trust rests on tools Maryland already gives counties — Development Rights and Responsibilities Agreements, local DRRR code, utility cost-allocation law, and recent high-court guidance on the CDI overlay. The citations below are for County Attorney and Council review; this section is research for the packet, not legal advice.

Maryland Land Use Article §§ 7-301 to 7-306 (DRRR statute)

- **§ 7-301** — Definitions for development rights and responsibilities agreements.
- **§ 7-302** — County authority to enter a DRRR.

- **§ 7-303** — Required contents, including public-welfare conditions and public-facility financing (the natural home for a local energy dividend, infrastructure leasehold language, and residual-interest covenants tied to new load).
- **§ 7-304** — Freeze of local laws for the agreement's term (why this filing refuses a multi-year zoning freeze traded for a one-time benefits list).
- **§ 7-305** — Procedures for adoption and administration.
- **§ 7-306** — No forced agreements; a DRRA is voluntary.

Frederick County Code Chapter 1-25

- **§ 1-25-2** — Public principal: the County acts for the public when it conditions development.
- **§ 1-25-4** — Contents of a local DRRA — enhanced public benefits and their value belong in the agreement text (dividend + infrastructure lease + residual tools).

Public Utilities Article § 4-212

Residential customers must not bear large-load financial risks. Data centers and other large loads must cover their own buildout costs. This is the cost-allocation spine for any county utility rider or large-load surcharge that funds host-community meter credits without shifting grid costs onto ordinary households.

2026 Utility RELIEF Act

Lowered the large-load threshold to **25 MW** and strengthened Public Service Commission oversight. Brings more CDI-scale load squarely under PSC review when financing or tariff tools are used.

Maryland Supreme Court, *In re Frederick County Data Center Referendum Committee*, No. 67, Sept. Term 2025 (June 30, 2026)

The CDI overlay is **not** subject to referendum. Map fights stay in plan-and-zoning acts; community benefit and Trust conditions attach through ordinance, DRRA, and site conditions — not a ballot veto of the overlay map.

Louisiana Act 434 (2026)

State enabling legislation before local tax credits drawn from data-center revenue. Useful precedent when Maryland needs a **2027 state bill** to clear a county utility rider or a residual equity interest dedicated to a host-community trust.

Legal-Risk

The county utility rider and any residual equity interest likely need **PSC approval** and/or a **2027 state enabling bill**. Conditioning only **new load** and **new DRRAs** — not confiscating 2021 vested rights — is the path that avoids takings claims on vested entitlements.

The Catellus **\$110 million** community-benefits package was **rejected September 14, 2026**. New CDI applications remain **paused through July 2027**. The Trust is a different instrument: an ongoing, megawatt-funded meter credit for Doubs, Adamstown, and Buckeystown — not a one-time DRRA package.

Comparison to the current memo

The memorandum already cites **Chapter 1-25**, the **CDI overlay**, and the **Maryland Supreme Court** order on referendum. It should be expanded to include the **§ 4-212** cost-allocation argument and the

Louisiana Act 434 precedent for the rider and equity tools — so County Attorney and Council see both the local DRRRA hook and the state/utility path in one place.

7. What this filing is not

Not a lawsuit. Not a protest. Not a political campaign. Neighbors with a plan — working people who fix what is broken, not politicians, activists, or consultants with a binder.

Not a request to raise taxes in Doubs, Adamstown, or Buckeystown. Not a ZIP-code subsidy. Not a substitute for a state data-center personal-property tax (support that separately and dedicate first dollars to this Trust). Not an invitation for Frederick City or other communities to freeload onto Tier 1 without a board vote AND a new ordinance titled as an expansion. Not legal advice. Ask the County Attorney which of A and C can be enacted under the Charter without a state bill, and publish the answer.

8. Prayer

Introduce the DAB ENERGY TRUST ordinance, attach the Trust bylaws as the governing instrument, and refuse any DRRRA that omits the dividend, gifts public infrastructure, or freezes zoning for a term of years. Keep the three communities exclusive by design. Keep the boundary the wall. Incorporate the Grandfather Clause and the Public Declaration — Host-Community Rebate as stated in this packet.

Respectfully submitted,

Nicholas M. Buckeystown / DAB area, Frederick County, MD

I'm very busy with my newborn, but that doesn't mean I can't make a few minutes of my time available to quickly handle this. A mechanic's habit: when something is broken on our road home, you fix it — you don't wait for Winchester Hall to invent a feeling about it.

Grandfather Clause — Keep This Version of Frederick

Purpose

We like it here. Keep Frederick looking like Frederick.

Grandfather — Keep This Version of Frederick. Stay incentive, not growth subsidy. Existing homes

and lawful uses as of January 20, 2026; no new construction after the cutoff rides the Trust preference.

We want farmers and rural neighbors to **remain in their homes** — not put land or houses up for sale because the overlay and the sprawl wave make selling look like the only move. The Grandfather Clause rewards the Frederick that already exists (cutoff **January 20, 2026**), not a subsidy for new pads after that date. Exclusive host-community meter credits belong here because the CDI overlay sits in this rural road-box; keep Frederick rural, keep the boundary the wall.

Cutoff date

January 20, 2026 — the effective date of Ordinance 26-01-001 (CDI overlay).

Who may qualify

Only **existing buildings, dwellings, and lawful uses as of the cutoff** may qualify for Trust eligibility, meter-credit / DAB Energy Dividend participation, and existing-community preference under Trust administration.

Eligibility also requires a qualifying Tier 1 service address inside the rural road-box — west Basford Road, east the Monocacy River, south Tuscarora Road, north the Elmer Derr / Harshman / New Design / Lime Kiln Road belt, with Doubs folded in alongside Adamstown and Buckeystown, and staying short of the Ballenger Creek suburban mass — and the meter rules in the bylaws. Lime Kiln Run is a creek, not a road. ZIP codes are not the lock. The Grandfather Clause is an additional existing-community filter tied to the cutoff — a stay incentive, not a substitute for geography, and not a growth subsidy.

What does not qualify

- **No new buildings qualify.**
- New construction, subdivisions, apartments, and commercial pads **after** the January 20, 2026 cutoff are **not grandfathered**.
- This clause is **not** a license to expand, intensify, or rebuild larger after the cutoff and still claim grandfathered Trust preference.
- It is an incentive to **keep what we have**, not a growth subsidy.

This section is proposed ordinance language for Council to enact with the DAB ENERGY TRUST. It is not current law until adopted.

Public Declaration — Host-Community Rebate

Declaration

Host communities Doubs, Adamstown, and Buckeystown are why this revenue exists. The campus sits on our doorstep — on the rural-industrial and grid edge we live next to. The rest of the county collects the benefit of a burden we live next to.

Sourced figures show about **\$53 million** already collected on Quantum-related recordation transactions (\$1.40M + \$6.67M + \$44.9M = \$52.97M per HR&A). That money does not appear as a power-bill credit on DAB meters.

Countywide forecasts of about **\$41 million**, **\$68.8 million**, and **\$215 million** annual fiscal revenue at buildout are **countywide buildout forecasts** — not money in DAB pockets. Those are Winchester Hall numbers, not Manor Woods numbers.

The Trust dividend is a **rebate due host communities** for site, grid edge, roads, rural buffer, and lived

impact.

Nobody else generated this. Winchester Hall numbers came off Manor Woods ground.

How to hear this argument

This is a rebate and credit argument for host communities. It does not allege criminal theft or illegal conduct. Recordation and property-tax dollars follow county and state formula; the ask is that host communities receive an operator-funded meter credit and Trust structure because they carry the lived burden of the campus and overlay.

Neighbors with a plan. Not a lawsuit. Not a protest. Not a campaign committee.

Supporting Materials

- **Legal Authority and Risk** — Official Plan / Memo § Legal Authority and Risk.

Bylaws highlights — DAB ENERGY TRUST

Article	Highlight
I — Name	DAB ENERGY TRUST (Doubs · Adamstown · Buckeystown). Seat in Doubs, Adamstown, or Buckeystown — not confined to Winchester Hall.
II — Purpose	Keep Frederick rural. Energy dividend to Tier 1 residential meters so farmers and residents can stay in their homes; funded by CDI load and infrastructure rent. Grandfather = stay incentive, not a growth subsidy. ZIP codes are not the eligibility lock. Exclusive by design — not Frederick City.
III — Beneficiaries	Tier 1 only: a residential meter whose service address lies in the rural road-box (west Basford Road, east the Monocacy River, south Tuscarora Road, north the Elmer Derr / Harshman / New Design / Lime Kiln Road belt), including Doubs, Adamstown, and Buckeystown, short of the Ballenger Creek suburban mass. Soft print: about 2,000 meters / about 5,500 residents (Medium confidence; exact GIS clip pending). Adamstown 710 + Buckeystown 499 = 1,209 are Adamstown / Buckeystown CDP 2020 stats (not the Trust base). Expansion only by board vote, new expansion ordinance, and elder consult where applicable.
IV — Board	Five voting members; at least one seat per town; default 2 / 2 / 1 . Doubs seat held by a Doubs resident inside the road-box.
IV-A — Elections	Weekend town hall; preferred location Adamstown Park or Buckeystown Park. Proof of residency: license, utility bill, or lease.
V–VIII	Duties (megawatt reports; publish by March 31); restricted funds; quarterly meetings under the Open Meetings Act; conflicts and recusal.
IX / IX-A	Amendment lock; elder consult — ten residents age 65 or older with at least ten years in Doubs, Adamstown, or Buckeystown before Tier 1 geography-change votes; advisory, not a veto.
X — Dissolution	Last dividend to Tier 1 meters; any residue only to energy-burden aid within Tier 1.
Schedule A	Proposed floor \$250 per meter per year; \$1/MWh of prior-twelve-month campus IT load between floor and cap; proposed cap \$1,000 ; not enacted until Council adopts.

When Council enacts the Trust, the January 20, 2026 grandfather cutoff and host-community rebate framing in this packet should be incorporated into Schedule A and Article III.

Resident handout / script

Spoken remarks

Why we’re doing this — my wife pulls out of our driveway onto MD 85 with our six-month-old and has to time it like a gap in freeway traffic. That’s not a statistic. That’s our morning.

MD 85 is Buckeystown Pike — a state highway through the Buckeystown Historic District. We are Doubs, Adamstown, Buckeystown — Our Home, Our Coalition. We like it here. Keep Frederick looking like Frederick.

About two thousand homes in the rural road-box — Doubs, Adamstown, and Buckeystown — and about fifty-five hundred residents. Stay. Don’t sell. The overlay is already on the books. Catellus is planned at two-point-four gigawatts. Construction is underway. About fifty-three million in Quantum-related recordation already collected — and it is not paying our electric bills.

No matter who you vote for, data centers are still going to be built here. A slogan does not stop steel. What we need is what we are due — a host-community rebate through a Trust we control: operator-funded meter credits. Nobody else generated this. Winchester Hall numbers came off Manor Woods ground.

Proposed floor two hundred fifty a year; proposed cap one thousand a year — dollar per megawatt-hour on prior-twelve-month campus IT load between those rails — not law until you pass it. On about two thousand meters that is a floor pool of about five hundred thousand a year and a cap pool of about two million. One seventy-two megawatt hall at seventy percent load is about four hundred forty-one thousand a year on the company side, about two hundred twenty-one dollars a meter — an illustration, not a tariff. Grandfather the buildings and lawful uses that existed on January twentieth, twenty twenty-six. That grandfather is a stay incentive, not a growth subsidy. No new buildings after that cutoff. Dividend is the floor; boundary is the wall — this rural road-box only, not Frederick City.

Not a lawsuit. Not a protest. Not a political campaign. Neighbors with a plan.

Doubs, Adamstown, Buckeystown first. That is the ask.

Summary table

Who	Residential meters in the rural road-box — west Basford Road, east the Monocacy River, south Tuscarora Road, north the Elmer Derr / Harshman / New Design / Lime Kiln Road belt — Doubs, Adamstown, and Buckeystown, short of the Ballenger Creek suburban mass. Lime Kiln Run is a creek, not a road. Not ZIP-locked (not ZIP 21704, and not any ZIP). Grandfather: existing buildings, dwellings, and lawful uses as of January 20, 2026 only — stay incentive, not a growth subsidy.
How many	About 2,000 homes / meters and about 5,500 residents in the rural road-box (Doubs · Adamstown · Buckeystown). Medium confidence; roughly 1,700–2,500 housing units and 4,600–6,700 residents; exact GIS clip pending. Adamstown / Buckeystown CDP 2020 stats (not the Trust base): 710 + 499 = 1,209 . No separate Doubs census count.
Campus	Planned 2.4 GW · about 17.4 million square feet · about 2,100 acres (CDI overlay about 2,614.9 acres) · construction underway
County collected	About \$53 million Quantum-related recordation (HR&A \$52.97 million). “\$110 million” Catellus package rejected September 14, 2026. Countywide forecasts \$41M / \$68.8M / \$215M are buildout forecasts, not DAB pocket money.

Proposed floor / cap	\$250 / \$1,000 per meter per year — \$1/MWh between floor and cap — proposed, not enacted law. On about 2,000 meters: floor pool ≈ \$500,000/yr ; cap pool ≈ \$2,000,000/yr . 72 MW hall at 70% load ≈ \$441,000/yr company-side (≈ \$221 / meter). Illustration, not a tariff. Do not lower the rates for passage.
Rebate	Host-community rebate for site, grid edge, roads, rural buffer, and lived impact. Nobody else generated this. Winchester Hall numbers came off Manor Woods ground.
Three tools	Energy Trust · public infrastructure lease · residual / state equity authority
Boundary and board	Expansion only by board vote, new ordinance, and elder consult. Board: five seats; each town at least one; default 2/2/1.

Ask of candidates and officials

I will put a DAB ENERGY TRUST dividend — megawatts to meters in the rural road-box of Doubs, Adamstown, and Buckeystown, with grandfather cutoff January 20, 2026 as a stay incentive — ahead of any countywide data-center benefit or zoning freeze, and condition new CDI occupancy and any DRRRA on that Trust.

Resident proposal letter

DAB ENERGY TRUST Doubs · Adamstown · Buckeystown — Our Home, Our Coalition

A note to our neighbors in Doubs, Adamstown, and Buckeystown

Friends—

I'm a mechanic, not a speechwriter, so I'll keep this plain. Something big is landing on our edge of the county. No matter who you vote for, data centers are still going to be built here. The overlay is already on the books. Construction is underway. A slogan does not stop steel.

So we carve out something for ourselves — because we absolutely should. It's our home. That carve-out is the **DAB ENERGY TRUST**: Doubs, Adamstown, and Buckeystown only — not Frederick City, not the whole county tagging along. Operators fund meter credits; we don't raise our tax rate. Proposed floor **\$250** and cap **\$1,000** per meter per year — the yearly credit follows prior-twelve-month campus IT load under the dollar-per-megawatt-hour rule, between those rails — proposed, not law yet.

We like it here. Keep Frederick looking like Frederick. We want farmers and neighbors to stay in their homes, not sell because the sprawl wave makes selling look like the only move. Grandfather the buildings and lawful uses that already existed on **January 20, 2026**. That is a stay incentive, not a subsidy for new pads. No new construction after that cutoff gets Trust preference. And say it plain: host communities are why this revenue exists. About **\$53 million** already collected on Quantum-related recordation is not a local meter credit. Countywide forecasts are Winchester Hall numbers — not Manor Woods numbers. Nobody else generated this. Winchester Hall numbers came off Manor Woods ground. That is a rebate and credit argument — not an accusation of crime.

The count we are using is about **2,000** homes in the rural road-box — west Basford Road, east the Monocacy River, south Tuscarora Road, north the Elmer Derr / Harshman / New Design / Lime Kiln Road belt — Doubs, Adamstown, and Buckeystown together, short of the Ballenger Creek suburbs. About **5,500** residents. Medium confidence until the exact line is clipped (roughly **1,700–2,500** homes and **4,600–6,700** people). Adamstown **710** and Buckeystown **499**, which is **1,209**, are Adamstown / Buckeystown CDP 2020 stats (not the Trust base). Doubs is a hamlet inside the box. We are not

inventing a separate Doubs census count. ZIP codes are not the lock. ZIP **21704** is far too broad. Lime Kiln Run is a creek, not a road.

Even outside data centers, apartments tend to follow. A Trust we control gives us a business deal we can live with and a line against that next wave of sprawl. Keep home beautiful.

Not a lawsuit. Not a protest. Not a political campaign. Neighbors with a plan. I'm very busy with my newborn; that doesn't mean I can't make a few minutes for this. If you're in Doubs, Adamstown, or Buckeystown, read this packet and help us get the ordinance introduced.

Our home. Our coalition.

Respectfully,

Nicholas M. Buckeystown / DAB area, Frederick County, MD

P.S. Preferred town-hall location: Adamstown Park or Buckeystown Park. Bring a license, utility bill, or lease.
